

30-Day C Language Learning Plan

Day 9: Break and Continue

1. Skip even numbers
2. Break on condition

Notes:

① BREAK: - used to immediately exit a loop (for, while or do-while).

↳ once break runs, the loop stops completely.

```
if (condition) {
```

```
    break;
```

```
}
```

② continue: - it's used to skip the current iteration of the loop.

↳ doesn't stop, moves to the next round of the loop.

Differences: -

	Break	Continue
stops loops	yes (completely)	No → skips to next iteration only
usage	when u want to stop looping early	when u want to skip certain values.
common use	exit loop on condition like, $i == 5$.	skip printing odd / even no.s.
