dy 21: Unions and Enums

1. Union example

2. Enum for days of week

Notes:

---

① UNIONS:- It is a special data type where all members share the same memory location.

↳ only one member can contain a value at any time.

SYNTAX.

```
union UnionName {
    dataType1 member 1;
    dataType2 member 2;
};
```

② ENUMS: (Enumerations).

An enum is used to assign names to a set of integer constants, making code more readable & manageable

SYNTAX :-

```
enum    EnumName {
            CONSTANT 1,
            CONSTANT 2,
            CONSTANT 3,
        };
```
