30-Day C Language Learning Plan

Day 5: Control Structures - if, else

1. Check if number is positive or negative
2. Find largest of 3 numbers

Notes:

_____

IF and ELSE statements let you make decisions in your program based on conditions.

```
if (condition) {
    // code runs if condition is true
}
else if (another_condition) {
    // code runs if the previous condition is
        false and this one is true
}
else {
    // code runs if all above conditions
        are false
}
```

⮑ use && for AND , || for OR , ! for NOT

⮑ conditions are evaluated in order, once one is true, the rest are skipped.
